Additional Backup Information

This contract is to provide Austin Water Utility with hydrogen peroxide to be purchased on an as-needed basis. Hydrogen peroxide is used for the treatment of wastewater to remove hydrogen sulfide thereby preventing odor and corrosion within wastewater collection and treatment systems. The product will be applied at a diversion box located at the former Govalle Wastewater Treatment Plant. The diversion box is the discharge point for the Boggy Creek Lift Station force main. The hydrogen peroxide is intended to treat the high concentrations of hydrogen sulfide in wastewater coming from the force main before it flows into the downstream collection system. In addition to supplying the hydrogen peroxide, the contractor will provide the equipment used to apply the chemical as well as maintenance services to ensure that the equipment functions optimally.
